4Q25 Print; Remaining Patient for Data

March 27, 2026

- **Bottom Line:** MapLight reported 4Q25 results and provided business updates. Importantly, all key pipeline programs remain on track, including:
 - # **ML-007C-MA (M1/M4 muscarinic agonist):**
 - Phase 2 ZEPHYR in schizophrenia is expected to reach target enrollment in April 2026, with top-line data expected in 3Q26; and
 - Phase 2 VISTA in ADP remains on track, with top-line data expected in 2H27.
 - # **ML-004 (5-HT1B/1D agonist) in ASD:**
 - Phase 2 IRIS study has completed enrollment, with top-line data expected in 3Q26.
- Additionally, the company continues to expand its earlier-stage pipeline and announced a next-generation M1/M4 muscarinic agonist (ML-005) will be nominated as a developmental candidate for psychiatric indications in 2026. The company believes ML-005 will have the potential for improved potency vs ML-007, once-daily dosing, and potential for a long-acting injectable formulation.
- 2025 R&D and G&A expenses came in above our estimates (~\$138M vs ~\$112M and ~\$31M vs. ~\$17M, respectively), driven primarily by higher employee-related costs, including stock-based compensation associated with post-IPO RSU vesting, which management indicated will be a one-time expense. This drove the variance between reported EPS and our estimate for 2025 (-\$18.56 vs. -\$5.20).
- The company ended the year with \$453M in cash, which it expects to fund operations through 2027. Based on the print and management commentary, we made some changes to the financial model, lowering the R&D spend, such that our EPS estimates changed from -\$4.50 to -\$3.45 for 2026 and from -\$4.25 to -\$3.25 for 2027. We look forward to multiple data readouts in 2026 and maintain our Outperform rating.

INVESTMENT THESIS

Our investment thesis is four-fold:

- We are still bullish on the muscarinic space, believing that physicians appreciate the differentiated profile of this new mechanism, that these agents could have broad applicability in treating schizophrenia, AD psychosis, and other CNS disorders (e.g., bipolar disorder, dyskinesias, autism spectrum disorder), and that for schizophrenia the agents seem to benefit the positive, negative and cognitive symptoms.
- Bristol/Karuna's Cobenfy demonstrated robust evidence across 3 clinical trials in schizophrenia and Lilly with Xanomeline (part of Cobenfy) demonstrated positive data in ADP many years ago (and we hope this will be confirmed with the imminent Cobenfy ADP data), so the class is partly de-risked in two key indications.
- The key asset ML-007C-MA has a potentially better clinical profile than Cobenfy, as it's more potent on both the M1 and M4 receptors, has potentially better dosing (QD vs BID in schizophrenia, BID vs TID in Alzheimer's disease psychosis), shorter titration, no fasting requirement, and better safety because of an improved fixed-dose co-formulation of an M1/ M4 agonist with a peripherally acting anticholinergic (PAC) that improves peripheral exposures to better mitigate the cholinergic AEs vs Cobenfy.
- ML-004 in autism spectrum disorder (ASD) is a wild card and not in the valuation today, but ASD is a high unmet need with nothing approved, and this asset is in Phase 2 development with data coming in 2H26.

VALUATION

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with a 10% discount rate.

RISKS TO VALUATION

Key risks to our investment thesis include:

- ML-007C-MA fails to demonstrate efficacy in the Phase 2 trial in schizophrenia in 2H26
- Bristol's Cobenfy fails to demonstrate efficacy in Alzheimer's disease psychosis in 4Q25
- New safety signal emerges in the schizophrenia or Alzheimer's disease psychosis programs
- Competing M4 agents (e.g., Neurocrine's NBI-568) demonstrate a better clinical profile

Valuation

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with a 10% discount rate.

Risks to Valuation

Key risks to our investment thesis include:

- ML-007C-MA fails to demonstrate efficacy in the Phase 2 trial in schizophrenia in 2H26
- Bristol's Cobenfy fails to demonstrate efficacy in Alzheimer's disease psychosis in 4Q25
- New safety signal emerges in the schizophrenia or Alzheimer's disease psychosis programs
- Competing M4 agents (e.g., Neurocrine's NBI-568) demonstrate a better clinical profile

Explanation of Ratings

Outperform (Buy): We expect this stock to outperform its benchmark over the next 12 months.

Market Perform (Hold/Neutral): We expect this stock to perform in line with its benchmark over the next 12 months.

Underperform (Sell): We expect this stock to underperform its benchmark over the next 12 months.

The degree of outperformance or underperformance required to warrant an Outperform or an Underperform rating should be commensurate with the risk profile of the company.

For the purposes of these definitions the relevant benchmark for "Leerink Partners" branded healthcare and life sciences equity research will be the S&P 600® Health Care Index for issuers with a market capitalization of less than \$2 billion and the S&P 500® Health Care Index for issuers with a market capitalization over \$2 billion.
