3Q25 Print; Pipeline Remains on Track

December 5, 2025

- **Bottom Line:** MapLight reported 3Q25 numbers and provided incremental updates to its pipeline programs.
- **Importantly, the company reiterated that top-line data of ML-007C-MA (M1/M4 muscarinic agonist) for:**
 - Phase 2 ZEPHYR in schizophrenia is expected in 2H26; and
 - Phase 2 VISTA in ADP is expected in 2H27.
- Phase 2 IRIS study of **ML-004 (5-HT 1B/1D agonist)** in ASD has completed enrollment with data expected in 2H26, which was also good to hear.
- **And for the earlier pipeline, the company is advancing the following to IND-enabling studies:**
 - **ML-021** (M4 antagonist) for motor deficits in PD in 2H26; and
 - **ML-009** (GPR52 PAM) for hyperactivity, impulsivity, and agitation-related disorders in 2026.
- **Also, the company ended the quarter with \$227M in cash, which in addition to the \$270M in net proceeds from the public offering and private placement should fund operations through 2027.**
- **Our investment thesis remains:**
- **(1)** We remain positive on the muscarinic class in schizophrenia given robust data with Cobenfy, which we believe de-risks ML-007C-MA in the first indication.
- **(2)** ADP represents a large unmet need and big market opportunity, and we think prior positive data with xanomeline supports the development of muscarinics in ADP.
- **(3)** The PK matching between ML-007C and the peripheral anticholinergic has the potential to improve the safety profile and ease-of-use over Cobenfy, offering a differentiated follow-on treatment as the second comer in the muscarinic class.
- **(4)** The opportunity with ML-004 in ASD and the emerging early pipeline is a wild card and not in the valuation today.
- **2026 will be an important year for data, and we remain patient with our Outperform rating.**

INVESTMENT THESIS

Our investment thesis is four-fold:

- We are still bullish on the muscarinic space, believing that physicians appreciate the differentiated profile of this new mechanism, that these agents could have broad applicability in treating schizophrenia, AD psychosis, and other CNS disorders (e.g., bipolar disorder, dyskinesias, autism spectrum disorder), and that for schizophrenia the agents seem to benefit the positive, negative and cognitive symptoms.
- Bristol/Karuna's Cobenfy demonstrated robust evidence across 3 clinical trials in schizophrenia and Lilly with Xanomeline (part of Cobenfy) demonstrated positive data in ADP many years ago (and we hope this will be confirmed with the imminent Cobenfy ADP data), so the class is partly de-risked in two key indications.
- The key asset ML-007C-MA has a potentially better clinical profile than Cobenfy, as it's more potent on both the M1 and M4 receptors, has potentially better dosing (QD vs BID in schizophrenia, BID vs TID in Alzheimer's disease psychosis), shorter titration, no fasting requirement, and better safety because of an improved fixed-dose co-formulation of an M1/ M4 agonist with a peripherally acting anticholinergic (PAC) that improves peripheral exposures to better mitigate the cholinergic AEs vs Cobenfy.
- ML-004 in autism spectrum disorder (ASD) is a wild card and not in the valuation today, but ASD is a high unmet need with nothing approved, and this asset is in Phase 2 development with data coming in 2H26.

VALUATION

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with a 10% discount rate.

RISKS TO VALUATION

Key risks to our investment thesis include:

- ML-007C-MA fails to demonstrate efficacy in the Phase 2 trial in schizophrenia in 2H26
- Bristol's Cobenfy fails to demonstrate efficacy in Alzheimer's disease psychosis in 4Q25
- New safety signal emerges in the schizophrenia or Alzheimer's disease psychosis programs
- Competing M4 agents (e.g., Neurocrine's NBI-568) demonstrate a better clinical profile

Valuation

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with a 10% discount rate.

Risks to Valuation

Key risks to our investment thesis include:

- ML-007C-MA fails to demonstrate efficacy in the Phase 2 trial in schizophrenia in 2H26
- Bristol's Cobenfy fails to demonstrate efficacy in Alzheimer's disease psychosis in 4Q25
- New safety signal emerges in the schizophrenia or Alzheimer's disease psychosis programs
- Competing M4 agents (e.g., Neurocrine's NBI-568) demonstrate a better clinical profile

SELL [UP]	3	1.0	1	33.3

Explanation of Ratings

Outperform (Buy): We expect this stock to outperform its benchmark over the next 12 months.

Market Perform (Hold/Neutral): We expect this stock to perform in line with its benchmark over the next 12 months.

Underperform (Sell): We expect this stock to underperform its benchmark over the next 12 months.

The degree of outperformance or underperformance required to warrant an Outperform or an Underperform rating should be commensurate with the risk profile of the company.

For the purposes of these definitions the relevant benchmark for "Leerink Partners" branded healthcare and life sciences equity research will be the S&P 600® Health Care Index for issuers with a market capitalization of less than \$2 billion and the S&P 500® Health Care Index for issuers with a market capitalization over \$2 billion.

Important Disclosures
