MPLT 3Q Results: Interim Interrupted? Data Delay Supports Positive Readthrough

MPLT reported 3Q earnings this morning. Also, yesterday BMJ announced continuation of the Phase 3 ADEPT-2 study for Cobenfy in ADP, but will exclude patients from certain sites and enroll additional patients.

Key Takeaways

- We see recent events as a net positive for the expansion of muscarinics in ADP, but acknowledge uncertainty remains until 2H27 and VISTA.
- With \$227M in cash (runway through 2027), MPLT can develop and advance MLO07, regardless of competitive outcomes. Also, MLO07 is differentiated.

For context, **BMJ** (covered by Terence Flynn) announced yesterday that "the company identified irregularities due to clinical trial execution at a small number of study sites. With these findings, prior to database lock, BMS made the decision to exclude patient data from those sites from the primary analysis." BMJ also notes that this was done following consultation and in agreement with FDA. (See research [here](#).)

MPLT ended 3Q with \$227M and runway through 2027. Phase 2 studies in schizophrenia (ZEPHYR) and ADP (VISTA) are on track for 2H26 and 2H27, respectively. We view the continuation of ADEPT-2 as a constructive signal for muscarinic agonism in ADP. We outline several factors supporting our view, but (given the limited information available and time till Phase 2 VISTA reads out) also acknowledge that considerable uncertainty remains, at least until end of 2027. Of note, we had a chance to speak with management following their 3Q earnings and recent competitive updates. While we see the ADEPT-2 study continuation as largely a clearing event, we suggest site irregularities within that study are more likely to be driven by protocol deviations (dose, inclusion/exclusion criteria, or data contamination).

Our View on ADEPT-2 Continuation

- **Safety isn't the biggest concern anymore.** ADEPT-2 suggests interim review by IDMC did not trigger futility, or at least that the risk-benefit profile remains acceptable (in Alzheimer's disease patients), which is important considering [Xanomeline 1997 study](#) was previously stopped early due to discontinuations. In contrast, site irregularities suggests the risk/benefit profile seems at least acceptable enough for IDMC to enroll more patients (suggesting the 1997 profile has been largely resolved and positioning Cobenfy to demonstrate efficacy).

- **What can we say for certain?** We see the lag between Cobenfy and ML007-C-MA as shortening. MapLight's Phase 2 VISTA study in ADP is expected in 2H27, and BMY will need positive topline from at least two ADEPT trials (all expected to read out by 2026). Indeed, we see the IDMC decision as a net de-risking event, and believe it also positions ML007-C-MA Phase 2 VISTA topline closely behind Cobenfy and its potential sNDA filing and launch.
- **What can't we say for certain? Placebo response.** We note that CNS trials are often the ones with highest placebo response. We can't say that Independent Data Monitoring Committee (IDMC) driven actions, such as dropping sites with systematic rater bias, or extending enrollment targets, are most often a result of unusually high placebo improvement. It is our belief that IDMCs may advise on sample size re-estimation when variability (including placebo response) is higher than expected, to maintain statistical power. We are not sure if this is a recognized adaptive measure under IDMC oversight. Our view is IDMCs could recommend dropping sites if interim data show outlier placebo responses, inconsistent assessments, or protocol deviations that threaten assay sensitivity. This is mentioned in [EMA](#) guidelines "*Uncertainty about sample size assumptions. E.g. size of placebo effect*". Similarly, [FDA](#) notes sample size re-estimation can be triggered by uncertainty in placebo event rates, for example when there is "*considerable uncertainty at the design stage about the proportions of patients in the placebo control group*." We note that BMY's [ADEPT-2](#) is enrolling through 119 sites across 11 countries (United States, Belgium, Chile, China, Greece, Hungary, Mexico, Peru, Poland, South Korea, Turkey).

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of November 30, 2025)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.
