

4Q25 Preview; Good Mojo Entering 2026

January 27, 2026

- **Bottom Line:** In this note, we include our usual quarterly earnings preview, with updated company financial models (see pgs 14-36) based on IQVIA TRxs, recent price increases, as well as company updates during the past few weeks, which resulted in a few price target changes and multiple earnings adjustments for our companies.
- **A few of our commercial stage companies preannounced 4Q25 numbers (AXSM and EOLS) or confirmed full-year 2025 guidance (ACAD, ALKS, NBIX, and JAZZ) - see our post-JPM note [HERE](#) - so the focus for these companies will be on 2026 guidance.**
- **Axsome (AXSM):** The company preannounced revenues for Auvelity of \$155M (we were at \$154M), Sunosi at \$37M (we were at \$33M), and Symbravo at \$4M (we were at \$8M). Hence, the focus will be on Alzheimer's disease agitation launch and expectations for incremental sales from that indication in 2H26/2027.
- **Evolus (EOLS):** The company pre-announced slightly weaker-than-expected revenue for 2025 of \$295.5-297.5M (vs. previous guide of \$295-305M, as well as guidance for 2026 of \$327-337M, which points to another year of moderate growth for both the toxin and the newly launched filler line given the continued challenging aesthetics market environment. Hence, the weakness in the stock in January, but we would expect an inflection point in the market at some point this year.
- **Acadia (ACAD)** indicated that 2025 sales are > \$1B, which is in-line with its guide of \$1.070-1.095B. The company continues to deliver strong execution on the turnaround of Nuplazid into the 5-10% growth range and the slow and steady growth of Daybue along with its geographic expansion. We expect the focus will be on the sales guide for 2026 as well as any commentary regarding the recently announced

2028 of \$1B for Nuplazid in Parkinson's disease psychosis and \$0.7B for Daybue in Rett syndrome. We remain more conservative than management on both products.

- **Neurocrine (NBIX)** reaffirmed the 2025 Ingrezza sales guide of \$2.50-2.55B (lower end of the range), so the focus will be on the 2026 sales guide for Ingrezza (probably in the high single-digit to low double-digit growth) as well as any commentary to think about the Crenessity ramp in year 2 (sales probably >\$600M in 2026).
- **Jazz (JAZZ)** confirmed revenues will come in for 2025 in the current guidance range of \$4.175-4.275B, but while investors are positive on the recent zani GEA data, the conversation has turned to 2026 top-line guidance because of concerns for the durability of Xywav in the face of both multi-generic Xyrem, the continued ramp of Alkermes/Avadel's Lumryz, and the emerging orexins. We think these concerns are overdone especially in the context of our bullish stance on zani. We have taken a much more conservative stance with the oxybate franchise but the bump for zani more than offsets this decline. Our EPS for the 2028 to 2030 period have increased on average by 15% per year.

PT changes:

- **Axsome (AXSM):** We have slightly increased our peak sales estimates for Auvelity but more importantly, we have increased the POS for Auvelity in Alzheimer's disease agitation following the FDA acceptance of the sNDA late last year, which moved our PT from \$150 to \$205.
- **Definium (DFTX):** We made some minor adjustments to our sales forecasts and slightly bumped our POS for DT120 in both GAD and MDD ahead of the pivotal readouts this year based on our strong conviction for positive data, which moved our PT from \$20 to \$23.
- **Belite Bio (BLTE):** We have increased both our peak sales for tinlarebant in Stargardt disease as well as our POS based on the company's recent commentary around filing timelines, which moved our PT from \$140 to \$185.
- **Stoke Therapeutics (STOK):** We bumped our POS for zorevunersen in Dravet syndrome based on recent data disclosures as well as management commentary regarding timelines for the pivotal study, which increased our PT from \$30 to \$50.

Investor interest is ramping up as expected for several near-term key events (see additional 2026 catalysts on pg 4): The events with the most attention include:

- **Xenon (XENE):** Azetukalner Phase 3 data in focal onset seizures in March.
- **Denali (DNLI):** Tivi PDUFA date in Hunter syndrome on April 5.
- **Axsome (AXSM):** Auvelity in Alzheimer's disease agitation PDUFA date on April 30.

HEALTHCARE

January 27, 2026

- **Biogen (BIIB):** Leqembi Iqlik SC AI as starting dose PDUFA date on May 24.
- **Definium (DFTX):** DT120 Phase 3 data in GAD and in MDD in 2Q26 and mid-2026, respectively.
- **Neumora (NMRA):** Navacaprant Phase 3 data in MDD in 2Q26.
- **Oculis (OCS):** OCS-01 Phase 3 data n DME in 2Q26.
- **Biogen (BIIB):** BIIB080 Phase 2 data in AD in mid-2026.

ACAD INVESTMENT THESIS

- 1 We believe that Nuplazid can continue to grow for the Parkinson's disease psychosis (PDP) indication from ~\$600M in 2024 to the \$800 - 850M range by the end of the decade with the LOE in October 2030.
- 2 We believe Daybue is a credible second asset that broadens ACADIA's portfolio and can drive peak sales in the \$400M range in the US and another ~\$300M OUS.

VALUATION

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2030s, with an 8% discount rate.

RISKS TO VALUATION

- Nuplazid Rxs don't accelerate as much as expected with the new DTC campaign.
- Nuplazid's following pivotal trials in schizophrenia negative symptoms don't work.
- Daybue in Rett syndrome has many new competitors that may steal share.

ACIU INVESTMENT THESIS

- 1 MAC Immune has a diversified pipeline of drug candidates and diagnostics for Alzheimer's disease (AD), including its Morphomer Tau, and anti-Abeta and anti-Tau vaccines.
- 2 The company has strong partners with J&J for ACI-35 (anti-Tau vaccine), Lilly for ACI-3024 (Morphomer Tau), WuXi Biologics for development of anti-TDP-43 antibodies, and Life Molecular Imaging [Not Rated] (formerly Piramal Imaging) for the Tau-PET tracer diagnostic, all of which help to validate and de-risk these key assets, fund clinical development of these expensive programs as well as commercialize the products, which would result in solid royalty streams if successful.
- 3 AC Immune also has two proprietary drug discovery platforms, one for antibodies and the other for small molecules, and a strong knowledge base in neurodegenerative diseases that should enable the company to keep putting new products into the pipeline.

VALUATION

Our \$9 PT is based on a sum-of-the-parts (SOTP) analysis that forecasts cash flows into 2030s, with a 12% discount rate.

RISKS TO VALUATION

- We view AD trials as the most risky in all of biopharma therapeutic areas given the numerous disappointments and the continued question about whether the amyloid hypothesis is valid

- Anti-Tau and anti-TDP-43 have not demonstrated proof of concept yet
- Many companies are pursuing AD research.

ALDX INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 Dry eye is a large market with limited competition (AbbVie's Restasis and Novartis' Xiidra), and reproxalap would be the first product that acts both acutely and chronically for treating symptoms and signs of dry eye, which should be an important point of differentiation, so the opportunity is significant—we estimate in the \$500M to \$1B range.
- 2 Reproxalap is a novel anti-inflammatory that also works for allergic conjunctivitis, which has significant comorbidity with dry eye and would be an important additional synergistic indication for these patients who complain of itching and dryness, with forecasted peak sales in the ~\$150M range.
- 3 ADX-2191 should be a high operating margin product and the first product approved for proliferative vitreoretinopathy (PVR) and primary vitreoretinal lymphoma (PVRL), two orphan inflammatory disorders of the retina with no approved therapies and with forecasted peak sales in the ~\$100M range.
- 4 ADX-629 is an oral version of reproxalap that demonstrates Aldeyra's platform in developing novel drugs for immune system regulation, and the company is exploring this molecule in four indications—ethanol toxicity, chronic cough, minimal change disease, and Sjögren-Larsson Syndrome—which we give no value to and thus any success would be upside to our valuation.

VALUATION

Our \$10 PT is based on a SOTP analysis that forecasts cash flows into the mid-2030s, with a 10% discount rate.

RISKS TO VALUATION

- Significant payer pushback could lead to lower-than-expected ASPs.
- Reproxalap is not able to differentiate itself significantly from larger competitors with higher share of voice.

ALKS INVESTMENT THESIS

- 1 We believe that expectations are too high for Lybalvi (ALKS-3831). Physicians (and we) like this product, but we believe reimbursement will be difficult for a new brand without a novel MOA in a highly generic market.
- 2 Regarding the orexin asset, we await for the full Phase 2 data to gain a visibility into the clinical development plans across the different narcolepsy indications.

- 3 We don't agree with the bullish stance by some investors that the base business can justify the current valuation for the whole company and thus the pipeline is viewed as a free wildcard.

VALUATION

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2030s, with an 7% discount rate.

RISKS TO VALUATION

- Flattening to decreasing growth trajectory of Vivitrol and Aristada
- Lower Vumerity royalty revenues due to a larger impact than expected from generic Tecfidera
- Negative efficacy/safety data from ALKS2680 (orexin-2 receptor agonist) in narcolepsy
- Conversely, compelling efficacy and safety for ALKS2680 across the broad narcolepsy indications with a best-in-class profile would represent an upside risk

AMLX INVESTMENT THESIS

Our investment thesis is three-fold:

- 1 **Avexitide has a solid chance of working in the registrational study (data expected in 1H26) given that it has already shown consistent efficacy across 2 Phase 2 studies** in lowering the incidence of Level 2/3 hypoglycemia events and lowering the rate of glycemic rescue needed in the PREVENT Phase 2 study.
- 2 **PBH is an area of high unmet need, particularly in a subset of more severely affected patients where symptoms of sweating, shakiness, anxiety, and fainting can be debilitating.** Physicians expect the number of PBH patients to stay fairly stable as the growing demand for weight loss intervention likely offsets any decline in bariatric surgery procedures driven by GLP-1 agonists.
- 3 **We think that avexitide can drive near-term value given our peak sales estimate of ~\$680M by 2039 even with conservative modeling assumptions.** We assume pricing of \$100K with 18% GTN at launch.

VALUATION

Our \$20 PT is based on a SOTP analysis that forecasts cash flows into the mid-2030s, with a 10% discount rate.

RISKS TO VALUATION

Downside risks to our valuation include:

- Avexitide could fail in Phase 3 studies.
- Uptake could be lower than expected in PBH.

AXSM INVESTMENT THESIS

1. The specialty pharma business model (using proprietary delivery technologies to develop a new product or through combining two older drugs) can work if the value proposition of the new product is differentiated like what we are seeing with Axsome, but this strategy should also have lower clinical and regulatory risk, lower development costs, and faster development/approval timelines via 505(b)(2) strategies.

2. This is not a one-product story; Axsome has a diversified portfolio of multiple products, including its lead asset Auvelity (AXS-05) which has been accepted by the FDA for major depressive disorder (MDD), and Axsome is also potentially pursuing two other indications (Alzheimer's disease [AD] agitation, and smoking cessation) that have little-to-no approved therapies and each could be significant for Axsome.

3. We think the migraine space will be a significant market, the branded acute segment is underappreciated, and AXS-07 should find a niche in that space as a faster onset alternative formulation of two well-known products.

4. Axsome is pursuing other indications for Sunosi (Attention Deficit and Hyperactivity Disorder (ADHD), MDD, Shift Work Disorder (SWD), and Binge Eating Disorder (BED)) which are meaningful opportunities, if successful, and which are under investor radar for now.

5. AXS-12 for narcolepsy and the primary care products (latter are not currently being funded right now) are potential upsides to the story, as we attribute lower value to AXS-12 and zero value to the primary care business.

VALUATION

- Our \$205 PT is based on a SOTP analysis that forecasts cash flows out to 2040, with a 7% discount rate.

RISKS TO VALUATION

- Combination trials don't demonstrate superior profiles vs. older stand-alone products.
- Payer pushback is significant and thus there may be lower-than-expected peak sales.
- Auvelity (AXS-05) struggles to differentiate itself in an increasingly crowded depression market.
- AXS-07 doesn't differentiate itself in an increasingly crowded migraine market.
- High placebo effect in late-stage CNS studies.
- Axsome has no track record regarding commercialization and thus must execute well in this area.

BHVN INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 We like the fast-follower strategy with the lead asset BHV-7000, which is relatively de-risked as a Kv7 channel activator, given that Xenon has already demonstrated strong evidence of efficacy with its XEN1101 for the lead indication of epilepsy as well as early proof-of-concept data in a potential follow-on indication with depression.
- 2 Taldefgrobep-alpha has a respectable chance of working in obesity as an adjunctive treatment to prevent muscle mass loss.
- 3 We like the degrader platform and its versatility and we believe it offers differentiated assets in Graves' disease and IgAN.
- 4 This leadership team created a great deal of value with the monetization of the migraine franchise to Pfizer, and we are counting on them to create value once again around a core Kv7 channel franchise.

VALUATION

Our \$15 PT is based on a SOTP analysis that forecasts cash flows into the 2030s, with a 10% discount rate.

RISKS TO VALUATION

- 1 BHV-7000 fails to show at least comparable safety and efficacy to Xenon's (XENE, OP) XEN1101.
- 2 BHV-7000 fails in expansion opportunities into areas such as MDD and bipolar disorder.
- 3 Taldefgrobep-alfa fails in obesity.
- 4 A safety signal shows up with the degrader platform.

BIIB INVESTMENT THESIS

Our thesis is four-fold:

1. We believe that the Alzheimer's franchise (lecanemab and other pipeline assets) can drive value for Biogen.
2. The valuation already reflects a significant Spinraza decline due to new competition and continued generic erosion for Tecfidera.
3. The durability of Biogen's base business profit stream (multiple sclerosis [MS] franchise, CD20 royalties, biosimilars) remains underappreciated and provides capital allocation optionality.

4. And the pipeline gets minimal attention and value attribution, and thus any good news from this portfolio can drive upside to the valuation, in our view.

VALUATION

Our \$260 PT is based on a sum-of-the-parts (SOTP) analysis that forecasts cash flows into 2037E, with a 7% discount rate.

RISKS TO VALUATION

Key risks to our investment thesis:

- Base business deterioration is worse than expected
- Spinraza declines even faster than our forecasts
- Early-stage pipeline products fail in late-stage studies

BLTE INVESTMENT THESIS

Our investment thesis is three-fold:

- 1 Inherited retinal diseases are becoming more of a focus given the advances in genetic medicine, and Stargardt disease (STGD1) has been heavily investigated as it is the most common inherited retinal disease caused by a single gene, with no approved therapy to-date. However, given complications related to the mutated gene (ABCA4) in the disease, progress to find a gene therapy has been slow.
- 2 Tinalarebant is an oral RBP4 antagonist with the potential to work in STGD1 given the MoA that involves reducing the delivery of retinol to the retina as an approach towards reducing the accumulation of bisretinoids in the retina. A POC trial with fenretinide (RBP4 antagonist) demonstrated the utility of the MoA in reducing lesion growth in geographic atrophy (GA). And tinalarebant demonstrated reduction in lesion growth rate in STGD1 patients in the ongoing Phase 2 study compared to patients in the ProgStar study (natural history) with similar baseline characteristics. The company is currently conducting a Phase 3 trial in adolescent STGD1 patients.
- 3 Tinalarebant may work in other retinal diseases such as GA given the similarity in the underlying pathology of bisretinoids accumulation to STGD1 in addition to the similarity in the lesion pattern between the two diseases. The drug is currently in Phase 3 development.

VALUATION

Our \$185 PT is based on a SOTP analysis that forecasts cash flows into the late 2030s, with a 10% discount rate.

RISKS TO VALUATION

- A new safety signal (beyond the ocular AEs) emerges in the ongoing Phase 2 open-label study or the Phase 3 study in STGD1 or GA.
- Chronic tinlarebant use results in poor visual outcomes due to meaningful reduction of retinol delivery to the retina.
- Tinsarebant fails to show a clinically meaningful reduction in lesion growth in the placebocontrolled Phase 3 study of STGD1.
- Competing agents with an improved safety profile, in particular with lack of ocular AEs, come into play

DFTX INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 We like the emerging psychedelics space with increasing investment in clinical development across multiple psychiatric indications, clear FDA guidance (issued in June 2023) and more established commercial infrastructure following the launch of J&J's Spravato.
- 2 GAD is a large market with high unmet need, and it has significant overlap with major depressive disorder (MDD).
- 3 We believe MM120 has a good chance of working in GAD based on published data from LSD and the robust Phase 2b data, and it has additional label expansion opportunities for MDD.
- 4 MM120's drug profile is well-positioned for commercial success in GAD/MDD, it could become the best-in-class product in GAD and achieve >\$1B peak sales opportunities for both indications.

VALUATION

Our \$23 PT is based on a SOTP analysis that forecasts cash flows into the early 2040s, with a 10% discount rate.

RISKS TO VALUATION

- MM120 Phase 3 studies fail to replicate the robust treatment benefits observed in Phase 2
- Unexpected new safety signal in Phase 3 studies
- Any regulatory setback that would delay the timeline
- Competition from other psychedelics (LSD or other molecules)

DNLI INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 This is our favorite CNS platform technology company. Denali's transport vehicle (TV) technology appears to solve a significant hurdle in CNS drug development—delivering biologics across the blood-brain barrier and into the brain—and its modular and flexible platform capability (it can deliver proteins, enzymes, antibodies, or anti-sense oligonucleotides) provides the company the ability to develop many different types of products across a diverse range of CNS therapeutic areas.
- 2 Denali's lead internal asset (DNL310 in Hunter syndrome) has demonstrated strong biomarker and clinical proof-of-concept data leveraging one of the TV drug delivery technologies—the enzyme transport vehicle (ETV) modality—such that the product not only has a good chance to be successful but also provides data that supports the company's approach to leverage this technology in other genetically-driven lysosomal storage disorders (i.e., the company's early pipeline of lysosomal storage disorder products are partially de-risked).
- 3 Denali's brain-penetrant small-molecule programs provide a complementary pipeline to the TV platform and are focused on novel mechanisms in high risk/high reward disease areas such as Parkinson's disease and ALS that are supported by biomarker-validated targets.
- 4 Denali has strong partners with Takeda, Sanofi, and Biogen, and the company is well funded to pursue multiple opportunities both internally and with its partners at the same time, resulting in a diverse portfolio of potential growth drivers.

VALUATION

Our \$40 PT is based on a SOTP analysis that forecasts cash flows into the early 2040s, with a 9% discount rate.

RISKS TO VALUATION

- The TV technology is still very new and could have unforeseen safety signals as new modalities continue to enter the clinic.
- There are existing safety concerns with the LRRK2 inhibitor class: LRRK2 inhibitors have shown lung AEs in the past (though these have not been observed with BIIB122/DNL151).
- The mechanisms for several programs are not extensively validated (such as eIF2b in ALS).
- Denali's development plan is reliant on numerous partnerships, which could be terminated in the future.

EOLS INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 We continue to believe that the toxins market can grow in the 5-10% range in the US and remain bullish that the global aesthetics market can also continue to grow in the single digits.
- 2 Jeuveau is the 4th neurotoxin to enter the US market, but unlike Galderma's Dysport or Merz' Xeomin, this is the first toxin that is really similar to Allergan's (AbbVie) Botox, a claim that is supported by a head-to-head study. Hence, we think this product does have a viable opportunity (as Evolus' management believes) to become the #2 player in the US market.
- 3 We like the management team as it has deep experience in the aesthetics space and has employed a smart strategy to build a successful brand in this category.
- 4 We expect management to use business development over time to bring in additional aesthetics products that can leverage the company's commercial infrastructure.

VALUATION

Our \$20 PT is based on a DCF analysis that forecasts cash flows to 2035E, with a 10% discount rate.

RISKS TO VALUATION

Risks to our valuation include:

- Competitors are larger with more resources and some have a portfolio of aesthetics products.
- The aesthetics space can be somewhat economically sensitive, thus the economic downturn may negatively impact Jeuveau's growth trajectory.
- This is a promotionally sensitive market, which could hold back operating margins.

HLUNB DC INVESTMENT THESIS

Our thesis is three-fold:

- 1 We expect Lundbeck to achieve its short-to-mid-term targets of mid-single-digit growth in revenues, but key products are facing LOEs starting the back half the decade, which would be an overhang to the long-term outlook.
- 2 The late-stage pipeline has few data events and none that could be meaningful for the stock.
- 3 The early-stage pipeline remains high risk, and for now we choose to wait for the company to deepen its pipeline either internally or through business development.

Given its history and strong focus, Lundbeck has a strong neuroscience franchise which we expect to continue. However, based on the current valuation, we believe it makes sense to wait for a better entry point with more visibility regarding long-term growth strategy and BD/ key pipeline products.

VALUATION

Our DKK 45 PT is based on a SOTP analysis that values the base business plus the pipeline, with a 6% discount rate.

RISKS TO VALUATION

- Faster-than-expected generic erosion.
- Slower revenue growth of key growth products (Vyepti, Trintellix, Rexulti, Abilify Maintena).
- Failure to advance the early-stage pipeline.
- Accelerated growth of key products (i.e., Vyepti and Rexulti) more than expected
- One or more of the high-risk high rewards assets from the pipeline (AF82422 in multiple system atrophy) start working and deliver meaningful value to the stock.

JAZZ INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 The durability of the Xyrem franchise remains underappreciated; Jazz has done a nice job managing the eventual 2023 LOE with an AG settlement and with the pivot to Xywav, which should help to protect over half of the 2021 Xyrem sales during the period after generic entry.
- 2 The oncology franchise should grow significantly from ~\$550M of sales in 2020 to ~\$1.2B of sales by 2025, driven by Zepzelca and Rylaze, thus providing nice diversification for the larger CNS franchise.
- 3 We like the GW deal, as it should be both accretive to earnings over the next few years and to the long-term growth rate, as we remain more bullish than consensus for potential peak sales for Epidiolex.
- 4 We expect management to continue to diversify and drive long-term growth for the company through strategic BD/M&A.

VALUATION

Our \$215 PT is based on a sum-of-the-parts (SOTP) analysis that forecasts cash flows to the late 2030s, with an 8% discount rate.

RISKS TO VALUATION

- Xywav sales are disappointing and thus the Xyrem franchise is less durable than expected.
- Epidiolex growth slows and thus sales don't come close to our \$1B forecast.
- Rylaze opportunity is smaller than expected or peak sales are lower than our estimates.

KLRS INVESTMENT THESIS

Our investment thesis is three-fold:

- 1 Wet AMD (age-related macular degeneration) represents a significant and growing market where there is still unmet need to extend the treatment duration and reduce the burden of administration for patients
- 2 TH103 is an anti-VEGF that is highly similar in structure to Eylea but has been engineered to have increased ocular retention vs. Eylea, which could result in longer duration efficacy and greater visual benefits
- 3 There is room for a longer-acting anti-VEGF therapy in the market, and TH103 would be commercially successful even if it only captured a small % of the anti-VEGF injection market share

VALUATION

Our \$20 PT is based on a SOTP analysis with a 12% discount rate.

RISKS TO VALUATION

- TH103 is currently in early-stage clinical development, and we do not currently have much human data yet
- There are several other players aiming to extend the treatment interval in wet AMD, so this space may become increasingly crowded
- For this product to be successful, it needs to improve on Roche's Vabysmo/Regeneron's Eylea HD metrics, which is a high bar

LBRX INVESTMENT THESIS

Our thesis is four-fold:

- 1 LB-102 is a methylated derivative of amisulpride, which is approved in Europe, so the POS for this mechanism is high.
- 2 The strong effect size of 0.73 for amisulpride or 0.83 for the highest dose of LB-102 puts the agent in the tier 1 efficacy bucket for schizophrenia (SCZ) agents (risperidone, olanzapine, Cobenfy), such that the SCZ indication is important.
- 3 The positive impact seems to be in both positive and negative symptoms of SCZ as well as a cognition (i.e., Cobenfy).
- 4 There is good rationale for additional indications - BPD and adjunctive MDD – given:
 - Its serotonergic (5HT7) and D3 activity and
 - Amisulpride is approved for MDD and dysthymia in certain European countries.

VALUATION

Our \$34 PT is based on a sum-of-the-parts (SOTP) analysis that forecasts cash flows into 2043E, with a 10% discount rate.

RISKS TO VALUATION

Key risks to our investment thesis:

- LB-102 fails in the Phase 3 trial of schizophrenia because of high placebo response
- New safety signals emerge in the Phase 3 programs
- LB-102 fails to demonstrate efficacy in bipolar depression and MDD and is just a schizophrenia agent
- Competing agents with improved efficacy and safety profile come into play.

LENZ INVESTMENT THESIS

Our investment thesis is three-fold:

- 1 The presbyopia market is a significant opportunity with high unmet need for an eyedrop that corrects deficits in near-vision while maintaining distance vision.
- 2 Lenz is the only company developing aceclidine-based drops for presbyopia; aceclidine has better selectivity for the pupil (i.e., enabling efficacy for near vision while preserving distance vision) over pilocarpine or carbachol, which are the active components in products by late-stage and marketed presbyopia competitors.
- 3 Lenz has already demonstrated positive registrational data with its aceclidine-based drop LNZ100, and we expect the eye drop to be approved for presbyopia in 2025.

VALUATION

Our \$36 PT is based on a DCF analysis that forecasts cash flows into 2040, with a 9% discount rate.

RISKS TO VALUATION

- To succeed in the launch, Lenz will have to overcome negative perceptions of presbyopia eye drops for patients and eyecare professionals who tried AbbVie/Allergan's Vuity and were disappointed.
- LNZ100 could also disappoint in the real-world if the drug profile does not end up meeting expectations.
- There are multiple marketed/late-stage competitors that could take presbyopia market share.

MPLT INVESTMENT THESIS

Our investment thesis is four-fold:

- We are still bullish on the muscarinic space, believing that physicians appreciate the differentiated profile of this new mechanism, that these agents could have broad applicability in treating schizophrenia, AD psychosis, and other CNS disorders (e.g., bipolar disorder, dyskinesias, autism spectrum disorder), and that for schizophrenia the agents seem to benefit the positive, negative and cognitive symptoms.
- Bristol/Karuna's Cobenfy demonstrated robust evidence across 3 clinical trials in schizophrenia and Lilly with Xanomeline (part of Cobenfy) demonstrated positive data in ADP many years ago (and we hope this will be confirmed with the imminent Cobenfy ADP data), so the class is partly de-risked in two key indications.
- The key asset ML-007C-MA has a potentially better clinical profile than Cobenfy, as it's more potent on both the M1 and M4 receptors, has potentially better dosing (QD vs BID in schizophrenia, BID vs TID in Alzheimer's disease psychosis), shorter titration, no fasting requirement, and better safety because of an improved fixed-dose co-formulation of an M1/ M4 agonist with a peripherally acting anticholinergic (PAC) that improves peripheral exposures to better mitigate the cholinergic AEs vs Cobenfy.
- ML-004 in autism spectrum disorder (ASD) is a wild card and not in the valuation today, but ASD is a high unmet need with nothing approved, and this asset is in Phase 2 development with data coming in 2H26.

VALUATION

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with a 10% discount rate.

RISKS TO VALUATION

Key risks to our investment thesis include:

- ML-007C-MA fails to demonstrate efficacy in the Phase 2 trial in schizophrenia in 2H26
- Bristol's Cobenfy fails to demonstrate efficacy in Alzheimer's disease psychosis in 4Q25
- New safety signal emerges in the schizophrenia or Alzheimer's disease psychosis programs
- Competing M4 agents (e.g., Neurocrine's NBI-568) demonstrate a better clinical profile

NBIX INVESTMENT THESIS

Our thesis is three-fold:

1. We believe that the value for the long-term Ingrezza franchise is underappreciated because of both peak sales as well as concerns for the impact from the IRA and LOE.
2. We believe crinecerfont in CAH can be a ~\$900M opportunity in US + Europe.
3. The pipeline gets minimal value in the stock, but we think NBI-921352 (partnered with Xenon as XEN901) has a good chance of working in focal onset seizures, and NBI-1117568 has a good chance of working in schizophrenia.

VALUATION

Our \$160 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with an 8% discount rate.

RISKS TO VALUATION

1. Ingrezza sales disappoint in the near term.
2. The IRA impact on Ingrezza is worse than expected.
3. Negative data for NBI-921352 (partnered with Xenon as XEN901) for focal onset seizures.

NMRA INVESTMENT THESIS

- **Our investment thesis is four-fold:**
 - 1. We like the diverse portfolio of opportunities where we can point to 4 specific programs that all have a good chance of success.
 - 2. NLRP3 inhibitors is an intriguing novel class with a broad potential across different indications including obesity, cardiometabolic, neurology and others, and Neumora's asset is a highly selective NLRP3 inhibitor and what appears to be best-in-class CNS exposure with a broad potential in obesity and in cardiometabolic indications.
 - 3. Navacaprant (KOR antagonist) is a nice wild card with a very favorable risk reward profile into the 2 MDD pivotal readouts coming very soon in 2Q26 given the minimal/probably no expectations for positive studies given the previous disappointing results from both Neumora and J&J with this mechanism.
 - 4. We are encouraged by early POC data from NMRA-511 (V1aR antagonist), which demonstrated strong efficacy in Alzheimer's disease agitation in a pre-specified population with elevated anxiety with favorable safety and tolerability profile, which appear to compare favorably thus far to SoC of antipsychotics with poor safety and tolerability.

VALUATION

Our \$8 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with a 10% discount rate.

RISKS TO VALUATION

- **Key risks to our investment thesis include:**
 - NMRA-215 fails to demonstrate robust efficacy in both obesity and cardiometabolic indications. A safety signal emerges with NMRA-215 or other NLRP3 inhibitors in development.
 - The muscarinic space is getting crowded, and Neumora will have to compete with more established players by the time it would potentially enter the market with an M4 PAM.
 - MDD remains a high-risk space for clinical development, and both KOASTAL-2 and -3 need to hit for approval.
 - NMRA-511 fails to demonstrate an efficacy signal in a larger trial.

OCS INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 Oculis has a proprietary eye drop formulation (soluble nanoparticle technology platform) that allows high concentrations of micro aggregates of drug to get to the back of the eye (retina), which KOLs describe as the first to accomplish this long sought-after goal and thus truly differentiated.
- 2 OCS-01 has the potential to be the first eye drop approved for DME, which is still a significant unmet need that is treated with anti-VEGF injections, and we would expect the eye drop to be used in both naïve patients as well as VEGF combo and VEGF failures.
- 3 The second late-stage asset, OCS-02 (licaminlimab), is another innovative eye drop formulation, this time with an anti-TNF α antibody fragment with known broad anti-inflammatory properties applied to the eye, and the company is pursuing dry eye disease (DED), a large market with unmet need for new MoA therapies.
- 4 The third asset in the pipeline, privosegator (OCS-05) has now shown solid POC data in acute optic neuritis and is being developed across 2 additional acute indications including relapsing remitting multiple sclerosis, which could be another significant opportunity for the company.

VALUATION

Our \$50 PT is based on a SOTP analysis that forecasts cash flows into the early 2040s, with a 12% discount rate.

RISKS TO VALUATION

- OCS-01 fails to show rapid and durable efficacy in the 2 large 52-week registrational studies
- OCS-02 fails to work in both signs and symptoms for DED
- OCS-02 fails to demonstrate a sufficient benefit/risk profile in uveitis in late-stage trials
- OSC-05 fails to demonstrate neuroprotection and functional benefit in acute optic neuritis and other acute indications.

OVID INVESTMENT THESIS

Our investment thesis is three-fold:

- 1 OV329 is second-gen GABA-AT inhibitor with greater potency and potentially improved safety, including the lack of retinal toxicity compared with the first-gen GABA-AT inhibitor (vigabatrin). Notably, vigabatrin demonstrates solid efficacy in complex partial seizures (a subtype of FOS) and infantile spasms, though its use has been limited given the black-box warning.
- 2 We like the epilepsy market; the FDA wants to approve new drugs, payer pushback is relatively low since patients are refractive to many AEDs, polypharmacy is the norm, so this is not a zero-sum game, and importantly physicians like to try new therapies—even 2nd-gen products of understood mechanisms with improved profiles.
- 3 We believe the KCC2 portfolio represents an interesting opportunity targeting a novel mechanism with strong biological validation, as genetic and preclinical evidence links KCC2 dysregulation to developmental and neuropsychiatric disorders. KCC2 activators could serve as a pipeline-in-a-product, with potential expansion across multiple high-value indications—including schizophrenia, Lewy body dementia psychosis, Rett syndrome, and autism—leveraging a single mechanism to address a broad spectrum of CNS disorders

VALUATION

Our \$5 PT is based on a SOTP analysis that forecasts cash flows into the early 2040s, with a 10% discount rate

RISKS TO VALUATION

- Unexpected new safety signal (especially retinal tox) for OV329
- Subpar efficacy for OV329 such that KOLs are uninterested
- KCC2 fails to demonstrate robust efficacy in the initial neuropsychiatric indications the company chooses to pursue

STOK INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 Dravet syndrome is an optimal target for Stoke's antisense therapies (TANGO platform) given that 85% of cases were caused by the SCN1A gene haploinsufficiency, which results in 50% of NaV1.1 protein expression. STK-001 can restore protein to normal levels, and it has demonstrated promising efficacy and relatively clean safety in preclinical models and Phase 1/2 studies, signaling strong treatment benefits.
- 2 There is significant unmet need for the treatment of Dravet syndrome, as all current SOC products are symptom-based that focused on seizure reductions with limited efficacy, and many patients are refractory. We believe a disease-modifying therapy like STK-001 will be welcomed by physicians and patients, and it would become a blockbuster as the first-in-class product.
- 3 The 2nd product STK-002 has generated initial preclinical data that are supportive of its development in autosomal dominant optic atrophy (ADOA), which is another haploinsufficient disease with unmet need.
- 4 And we believe the company could leverage its TANGO platform to deliver additional products across a broad range of genetic disorders (~1,200 monogenic disease genes and ~6,500 additional genes with TANGO target signatures).

VALUATION

Our \$50 PT is based on a SOTP analysis that forecasts cash flows into the early 2030s, with a 10% discount rate.

RISKS TO VALUATION

- STK-001 fails to demonstrate significant treatment effect in late-stage trials.
- STK-001 does not differentiate itself from SOC anti-epileptics.
- Unexpected safety signals.
- Competition from other disease-modifying therapies (DMTs).
- Significant payer pushback (i.e., any major change in the price or reimbursement of coverage).
- Other early pipeline programs fail to advance into late-stage studies.

XENE INVESTMENT THESIS

Our investment thesis is four-fold:

- 1 We like the epilepsy market; companies are utilizing fast-mover development strategies by focusing on orphan epilepsies, the FDA wants to approve new drugs, physicians like to try

new therapies, patients are often on multiple drugs and payer pushback is relatively low since patients are refractive to many AEDs.

- 2 Xenon has a diversified portfolio of agents targeting both orphan epilepsy indications with high unmet need and/or no approved agents as well as larger epilepsy populations (focal epilepsy) with additional unmet need for novel mechanism agents.
- 3 The XEN1101 program has been partially de-risked given the robust clinical data of the Phase 2b X-TOLE study in focal onset seizures (FOS).
- 4 XEN1101 addresses a large market in focal epilepsy and if the safety improvements continue to play out when the product is commercialized, peak sales could be a real upside surprise.

VALUATION

Our \$50 PT is based on a SOTP analysis that forecasts cash flows to the late 2030s, with a 8% discount rate.

RISKS TO VALUATION

- XEN1101 shows new safety signal on the tissue pigmentation or on the urinary retention issues of ezogabine
- Xenon's epilepsy assets struggle to differentiate themselves in an epilepsy market with multiple new agents
- Variability in epilepsy syndromes responding to a given agent could mean some patient groups do not respond
- FDA may require more development work than expected even though underlying molecules are well known
- Significant payer pushback may lead to lower-than-expected peak sales

DISCLOSURE APPENDIX

Completion: January 27, 2026 23:42 P.M. EDT.

Distribution: January 27, 2026 23:42 P.M. EDT.

ACAD: Valuation

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2030s, with an 8% discount rate.

ACAD: Risks to Valuation

- Nuplazid Rx's don't accelerate as much as expected with the new DTC campaign.
- Nuplazid's following pivotal trials in schizophrenia negative symptoms don't work.
- Daybue in Rett syndrome has many new competitors that may steal share.

ACIU: Valuation

Our \$9 PT is based on a sum-of-the-parts (SOTP) analysis that forecasts cash flows into 2030s, with a 12% discount rate.

ACIU: Risks to Valuation

- We view AD trials as the most risky in all of biopharma therapeutic areas given the numerous disappointments and the continued question about whether the amyloid hypothesis is valid
- Anti-Tau and anti-TDP-43 have not demonstrated proof of concept yet
- Many companies are pursuing AD research.

ALDX: Valuation

Our \$10 PT is based on a SOTP analysis that forecasts cash flows into the mid-2030s, with a 10% discount rate.

ALDX: Risks to Valuation

- Significant payer pushback could lead to lower-than-expected ASPs.
- Reproxalap is not able to differentiate itself significantly from larger competitors with higher share of voice.

ALKS: Valuation

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2030s, with an 7% discount rate.

ALKS: Risks to Valuation

- Flattening to decreasing growth trajectory of Vivitrol and Aristada
- Lower Vumerity royalty revenues due to a larger impact than expected from generic Tecfidera
- Negative efficacy/safety data from ALKS2680 (orexin-2 receptor agonist) in narcolepsy
- Conversely, compelling efficacy and safety for ALKS2680 across the broad narcolepsy indications with a best-in-class profile would represent an upside risk

AMLX: Valuation

Our \$20 PT is based on a SOTP analysis that forecasts cash flows into the mid-2030s, with a 10% discount rate.

AMLX: Risks to Valuation

Downside risks to our valuation include:

- Avexitide could fail in Phase 3 studies.
- Uptake could be lower than expected in PBH.

AXSM: Valuation

- Our \$205 PT is based on a SOTP analysis that forecasts cash flows out to 2040, with a 7% discount rate.

AXSM: Risks to Valuation

- Combination trials don't demonstrate superior profiles vs. older stand-alone products.
- Payer pushback is significant and thus there may be lower-than-expected peak sales.
- Auvelity (AXS-05) struggles to differentiate itself in an increasingly crowded depression market.
- AXS-07 doesn't differentiate itself in an increasingly crowded migraine market.
- High placebo effect in late-stage CNS studies.
- Axsome has no track record regarding commercialization and thus must execute well in this area.

BHVN: Valuation

Our \$15 PT is based on a SOTP analysis that forecasts cash flows into the 2030s, with a 10% discount rate.

BHVN: Risks to Valuation

- 1 BHV-7000 fails to show at least comparable safety and efficacy to Xenon's (XENE, OP) XEN1101.
- 2 BHV-7000 fails in expansion opportunities into areas such as MDD and bipolar disorder.
- 3 Taldefgrobep-alfa fails in obesity.
- 4 A safety signal shows up with the degrader platform.

BIIB: Valuation

Our \$260 PT is based on a sum-of-the-parts (SOTP) analysis that forecasts cash flows into 2037E, with a 7% discount rate.

BIIB: Risks to Valuation

Key risks to our investment thesis:

- Base business deterioration is worse than expected
- Spinraza declines even faster than our forecasts
- Early-stage pipeline products fail in late-stage studies

BLTE: Valuation

Our \$185 PT is based on a SOTP analysis that forecasts cash flows into the late 2030s, with a 10% discount rate.

BLTE: Risks to Valuation

- A new safety signal (beyond the ocular AEs) emerges in the ongoing Phase 2 open-label study or the Phase 3 study in STGD1 or GA.
- Chronic tinlarebant use results in poor visual outcomes due to meaningful reduction of retinol delivery to the retina.
- Tinlarebant fails to show a clinically meaningful reduction in lesion growth in the placebocontrolled Phase 3 study of STGD1.
- Competing agents with an improved safety profile, in particular with lack of ocular AEs, come into play

DFTX: Valuation

Our \$23 PT is based on a SOTP analysis that forecasts cash flows into the early 2040s, with a 10% discount rate.

DFTX: Risks to Valuation

- MM120 Phase 3 studies fail to replicate the robust treatment benefits observed in Phase 2
- Unexpected new safety signal in Phase 3 studies
- Any regulatory setback that would delay the timeline
- Competition from other psychedelics (LSD or other molecules)

DNLI: Valuation

Our \$40 PT is based on a SOTP analysis that forecasts cash flows into the early 2040s, with a 9% discount rate.

DNLI: Risks to Valuation

- The TV technology is still very new and could have unforeseen safety signals as new modalities continue to enter the clinic.
- There are existing safety concerns with the LRRK2 inhibitor class: LRRK2 inhibitors have shown lung AEs in the past (though these have not been observed with BIIB122/DNL151).
- The mechanisms for several programs are not extensively validated (such as eIF2b in ALS).
- Denali's development plan is reliant on numerous partnerships, which could be terminated in the future.

EOLS: Valuation

Our \$20 PT is based on a DCF analysis that forecasts cash flows to 2035E, with a 10% discount rate.

EOLS: Risks to Valuation

Risks to our valuation include:

- Competitors are larger with more resources and some have a portfolio of aesthetics products.
- The aesthetics space can be somewhat economically sensitive, thus the economic downturn may negatively impact Jeuveau's growth trajectory.
- This is a promotionally sensitive market, which could hold back operating margins.

HLUNB DC: Valuation

Our DKK 45 PT is based on a SOTP analysis that values the base business plus the pipeline, with a 6% discount rate.

HLUNB DC: Risks to Valuation

- Faster-than-expected generic erosion.
- Slower revenue growth of key growth products (Vyepi, Trintellix, Rexulti, Abilify Maintena).
- Failure to advance the early-stage pipeline.

- Accelerated growth of key products (i.e., Vyepti and Rexulti) more than expected
- One or more of the high-risk high rewards assets from the pipeline (AF82422 in multiple system atrophy) start working and deliver meaningful value to the stock.

JAZZ: Valuation

Our \$215 PT is based on a sum-of-the-parts (SOTP) analysis that forecasts cash flows to the late 2030s, with an 8% discount rate.

JAZZ: Risks to Valuation

- Xywav sales are disappointing and thus the Xyrem franchise is less durable than expected.
- Epidiolex growth slows and thus sales don't come close to our \$1B forecast.
- Rylaze opportunity is smaller than expected or peak sales are lower than our estimates.

KLRS: Valuation

Our \$20 PT is based on a SOTP analysis with a 12% discount rate.

KLRS: Risks to Valuation

- TH103 is currently in early-stage clinical development, and we do not currently have much human data yet
- There are several other players aiming to extend the treatment interval in wet AMD, so this space may become increasingly crowded
- For this product to be successful, it needs to improve on Roche's Vabysmo/Regeneron's Eylea HD metrics, which is a high bar

LBRX: Valuation

Our \$34 PT is based on a sum-of-the-parts (SOTP) analysis that forecasts cash flows into 2043E, with a 10% discount rate.

LBRX: Risks to Valuation

Key risks to our investment thesis:

- LB-102 fails in the Phase 3 trial of schizophrenia because of high placebo response
- New safety signals emerge in the Phase 3 programs
- LB-102 fails to demonstrate efficacy in bipolar depression and MDD and is just a schizophrenia agent
- Competing agents with improved efficacy and safety profile come into play.

LENZ: Valuation

Our \$36 PT is based on a DCF analysis that forecasts cash flows into 2040, with a 9% discount rate.

LENZ: Risks to Valuation

- To succeed in the launch, Lenz will have to overcome negative perceptions of presbyopia eye drops for patients and eyecare professionals who tried AbbVie/Allergan's Vuity and were disappointed.
- LNZ100 could also disappoint in the real-world if the drug profile does not end up meeting expectations.
- There are multiple marketed/late-stage competitors that could take presbyopia market share.

MPLT: Valuation

Our \$30 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with a 10% discount rate.

MPLT: Risks to Valuation

Key risks to our investment thesis include:

- ML-007C-MA fails to demonstrate efficacy in the Phase 2 trial in schizophrenia in 2H26
- Bristol's Cobenfy fails to demonstrate efficacy in Alzheimer's disease psychosis in 4Q25
- New safety signal emerges in the schizophrenia or Alzheimer's disease psychosis programs
- Competing M4 agents (e.g., Neurocrine's NBI-'568) demonstrate a better clinical profile

NBIX: Valuation

Our \$160 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with an 8% discount rate.

NBIX: Risks to Valuation

1. Ingrezza sales disappoint in the near term.
2. The IRA impact on Ingrezza is worse than expected.
3. Negative data for NBI-921352 (partnered with Xenon as XEN901) for focal onset seizures.

NMRA: Valuation

Our \$8 PT is based on a SOTP analysis that forecasts cash flows into the 2040s, with a 10% discount rate.

NMRA: Risks to Valuation

• Key risks to our investment thesis include:

- NMRA-215 fails to demonstrate robust efficacy in both obesity and cardiometabolic indications. A safety signal emerges with NMRA-215 or other NLRP3 inhibitors in development.
- The muscarinic space is getting crowded, and Neumora will have to compete with more established players by the time it would potentially enter the market with an M4 PAM.
- MDD remains a high-risk space for clinical development, and both KOASTAL-2 and -3 need to hit for approval.
- NMRA-511 fails to demonstrate an efficacy signal in a larger trial.

OCS: Valuation

Our \$50 PT is based on a SOTP analysis that forecasts cash flows into the early 2040s, with a 12% discount rate.

OCS: Risks to Valuation

- OCS-01 fails to show rapid and durable efficacy in the 2 large 52-week registrational studies
- OCS-02 fails to work in both signs and symptoms for DED
- OCS-02 fails to demonstrate a sufficient benefit/risk profile in uveitis in late-stage trials
- OSC-05 fails to demonstrate neuroprotection and functional benefit in acute optic neuritis and other acute indications.

OVID: Valuation

Our \$5 PT is based on a SOTP analysis that forecasts cash flows into the early 2040s, with a 10% discount rate

OVID: Risks to Valuation

- Unexpected new safety signal (especially retinal tox) for OV329
- Subpar efficacy for OV329 such that KOLs are uninterested
- KCC2 fails to demonstrate robust efficacy in the initial neuropsychiatric indications the company chooses to pursue

STOK: Valuation

Our \$50 PT is based on a SOTP analysis that forecasts cash flows into the early 2030s, with a 10% discount rate.

STOK: Risks to Valuation

- STK-001 fails to demonstrate significant treatment effect in late-stage trials.
- STK-001 does not differentiate itself from SOC anti-epileptics.
- Unexpected safety signals.
- Competition from other disease-modifying therapies (DMTs).
- Significant payer pushback (i.e., any major change in the price or reimbursement of coverage).
- Other early pipeline programs fail to advance into late-stage studies.

XENE: Valuation

Our \$50 PT is based on a SOTP analysis that forecasts cash flows to the late 2030s, with a 8% discount rate.

XENE: Risks to Valuation

- XEN1101 shows new safety signal on the tissue pigmentation or on the urinary retention issues of ezogabine
- Xenon's epilepsy assets struggle to differentiate themselves in an epilepsy market with multiple new agents
- Variability in epilepsy syndromes responding to a given agent could mean some patient groups do not respond
- FDA may require more development work than expected even though underlying molecules are well known
- Significant payer pushback may lead to lower-than-expected peak sales

Distribution of Ratings/Investment Banking Services (IB) as of 12/31/25				
Rating	Count	Percent	IB Serv./Past 12 Mos.	
			Count	Percent
BUY [OP]	222	76.6	122	55.0
HOLD [MP]	66	22.8	15	22.7
SELL [UP]	2	0.7	0	0

Explanation of Ratings

Outperform (Buy): We expect this stock to outperform its benchmark over the next 12 months.

Market Perform (Hold/Neutral): We expect this stock to perform in line with its benchmark over the next 12 months.

Underperform (Sell): We expect this stock to underperform its benchmark over the next 12 months.

The degree of outperformance or underperformance required to warrant an Outperform or an Underperform rating should be commensurate with the risk profile of the company.

For the purposes of these definitions the relevant benchmark for "Leerink Partners" branded healthcare and life sciences equity research will be the S&P 600® Health Care Index for issuers with a market capitalization of less than \$2 billion and the S&P 500® Health Care Index for issuers with a market capitalization over \$2 billion.

Important Disclosures

This information (including, but not limited to, prices, quotes and statistics) has been obtained from sources that we believe reliable, but we do not represent that it is accurate or complete and it should not be relied upon as such. All information is subject to change without notice. The information is intended for Institutional Use Only and is not an offer to sell or a solicitation to buy any product to which this information relates. Leerink Partners LLC (the “Firm” or “Leerink Partners”), its officers, directors, employees, proprietary accounts and affiliates may have a position, long or short, in the securities referred to in this report, and/or other related securities, and from time to time may increase or decrease the position or express a view that is contrary to that contained in this report. The Firm’s research analysts, salespeople, traders and other professionals may provide oral or written market commentary or trading strategies that are contrary to opinions expressed in this report. The past performance of securities does not guarantee or predict future performance. Transaction strategies described herein may not be suitable for all investors. This document may not be reproduced or circulated without the Firm’s written authority. Like all Firm employees, research analysts receive compensation that is impacted by, among other factors, overall firm profitability, which includes revenues from, among other business units, Institutional Equities, Research, and Investment Banking. Research analysts, however, are not compensated for a specific investment banking services transaction. To the extent Leerink Partners’ research reports are referenced in this material, they are either attached hereto or information about these companies, including prices, rating, market making status, price charts, compensation disclosures, Analyst Certifications, etc. is available on <https://leerink.bluematrix.com/sellside/Disclosures.action>.

MEDACorp LLC, an affiliate of Leerink Partners, is a global network of independent healthcare professionals (Key Opinion Leaders and consultants) providing industry and market insights to Leerink Partners and its clients.

In the past 12 months, Leerink Partners has received compensation for providing investment banking services to AC Immune SA, Amylyx Pharmaceuticals, Inc., Axsome Therapeutics, Inc., Belite Bio, Inc., Biohaven Ltd., Definium Therapeutics, Inc., Evolus, Inc., Kalaris Therapeutics, Inc., LB Pharmaceuticals Inc., LENZ Therapeutics, Inc., MapLight Therapeutics, Inc., Neumora Therapeutics, Inc., Oculis Holding AG, Ovid Therapeutics Inc. and Xenon Pharmaceuticals Inc.

Leerink Partners expects to receive compensation for investment banking services from Axsome Therapeutics, Inc., Belite Bio, Inc., Definium Therapeutics, Inc., Denali Therapeutics Inc., Evolus, Inc., Neumora Therapeutics, Inc. and Oculis Holding AG in the next 3 months.

Leerink Partners makes a market in ACADIA Pharmaceuticals Inc., Aldeyra Therapeutics, Inc., Alkermes plc, AC Immune SA, Amylyx Pharmaceuticals, Inc., Axsome Therapeutics, Inc., Belite Bio, Inc., Biogen Inc., Biohaven Ltd., Definium Therapeutics, Inc., Denali Therapeutics Inc., Evolus, Inc., Jazz Pharmaceuticals plc, Kalaris Therapeutics, Inc., LB Pharmaceuticals Inc, LENZ Therapeutics, Inc., MapLight Therapeutics, Inc., Neumora Therapeutics, Inc., Neurocrine Biosciences, Inc., Oculis Holding AG, Ovid Therapeutics Inc., Stoke Therapeutics, Inc. and Xenon Pharmaceuticals Inc.

Leerink Partners is willing to sell to, or buy from, clients the common stock of H. Lundbeck A/S on a principal basis.

Leerink Partners has acted as a manager for a public offering of AC Immune SA in the past 12 months.

Leerink Partners has acted as a manager for a public offering of Amylyx Pharmaceuticals, Inc. in the past 12 months.

Leerink Partners has acted as a manager for a public offering of Axsome Therapeutics, Inc. in the past 12 months.

Leerink Partners has acted as a manager for a public offering of Biohaven Ltd. in the past 12 months.

Leerink Partners has acted as a manager for a public offering of Belite Bio, Inc. in the past 12 months.

Leerink Partners has acted as a manager for a public offering of LB Pharmaceuticals Inc in the past 12 months.

Leerink Partners has acted as a manager for a public offering of Xenon Pharmaceuticals Inc. in the past 12 months.

Leerink Partners has acted as the manager for a public offering of Definium Therapeutics, Inc. in the past 12 months.

Leerink Partners has acted as the manager for a public offering of MapLight Therapeutics, Inc. in the past 12 months.

Leerink Partners has acted as the manager for a public offering of Oculis Holding AG in the past 12 months.
